About the Company

At TechPryme, we're dedicated to understanding our clients' unique needs. By tailoring technology and business process outsourcing solutions, we exceed expectations and build lasting partnerships based on mutual success.

Our team of experts seamlessly integrates innovation with an in-depth comprehension of your business landscape, ensuring that our solutions are not just advanced but intricately customized to empower your business like never before.

Our Mission

Provide integrated, end-to-end commercial technology solutions.

Our Vision

Your Technology Solutions Partner

What is Structured Cabling?

Structured cabling is a standardized and organized approach to designing and installing a complete telecommunications cabling infrastructure within a building or campus. It's not just a collection of cables; it's a comprehensive system made up of smaller, standardized elements (subsystems) that work together to support various communication needs, including data, voice, and video.

At TechPryme, we deliver professionally engineered Structured Cabling Solutions that serve as the foundation of your business's IT and communications network. Whether it's for a new office fit-out, facility expansion, or infrastructure upgrade, our solutions are tailored for performance, scalability, and long-term reliability.

Industries We Serve

Corporate Offices

BPOs and Call Centers

Educational Institutions

Healthcare Facilities

Retail and Commercial
Spaces

Industrial & Logistics Sites

Our Services

At TechPryme, we provide structured cabling solutions designed to deliver reliable, scalable, and high-performance connectivity for businesses of all sizes. From planning to implementation, we ensure your IT infrastructure is built to support your current operations and future growth.

Why Structured Cabling Services Matters

Supports current and future business needs

Reduces downtime and maintenance costs

Simplifies trouble shooting and scalability

Enhances performance and data security

Mobilization and Demobilization

- Site preparation and logistics coordination for efficient deployment of personnel, tools, and materials.
- Project briefing and safety orientation prior to execution.
- Systematic demobilization post-completion to restore site condition and remove debris/equipment.

Conduit & Cabling Provisions for Data Nodes

- Installation of conduits, raceways, and cable trays to protect data cables from interference or damage.
- Strategic positioning of data nodes and access points for optimal performance and accessibility.
- Use of industry-compliant materials ensuring longevity and compliance.

Cable Grooming & Termination (End to End)

- Structured layout of UTP, fiber optic, or coaxial cables with neat bundling and labeling.
- Professional cable termination at both the patch panel and device end (wall outlets, switches, etc.).
- Compliance and local standards for reliable connectivity.

Testing & Documentation

- Full continuity, attenuation, and signal integrity testing using certified testing tools.
- Troubleshooting and remediation for any failed cable runs.
- Detailed cable documentation, test results, and as-built drawings submitted upon completion.

Mounting of Devices

- Professional installation of network devices such as switches, routers, access points, and patch panels.
- Wall, ceiling, or rack-mounting depending on network design and client requirements.
- Secure and aesthetic mounting to maintain accessibility and system safety.

Assistance During Activation

- Onsite technical support during the commissioning and go-live phase.
- Configuration checks, physical validation, and real-time troubleshooting with your IT team or ISP.
- Ensures smooth handover and operational readiness from day one.

Project Turnover

- Final walkthrough and client acceptance validation.
- Handover of all documentation: network diagrams, test reports, inventory list, and warranty info.
- Post-project support coverage and maintenance options presented.

Other Services
